

Drone

- The drone is heard right through most Indian performances
- The drone can sound a little confusing to some people, because it is only two notes played through continuously.
- It takes time to separate the sound of the drone from the rest of the music.
- The drone is played by the TAMBURA.
- The Tambura has a long neck and four strings.
- The four strings of the Tambura are usually tuned to the first and fifth notes of the chosen raga.
